

Microbiology update CDL days

Assignments for the remainder of the school year if necessary.

Update assignment for Microbiology

Starting on Monday March 23, 2020 Create two running charts of data. Each charts must include with the date, the number of reported people who have been tested, the number who tested positive and the number who tested negative.

Highlight the day on your chart that Harlan County get it's first case of Novel Coronavirus

1. The first chart is for our home state of Kentucky.
2. The second one is for the United States.

You will complete this each day for as long as we are out for CDL days. Each day at 5p.m. Our governor will give an update on these totals for Kentucky.

The National numbers can be found all over the internet.

When Harlan County get it's first confirmed positive confirmed case start a 3rd chart for Harlan County only and keep a running log of data for our county too!
