

Name:

# NTI Day 7

Teacher:

<p>Find the slope between the following points: <math>(-9, 10)</math>, and <math>(0, -2)</math></p>	<p>Find the slope between the following points: <math>(-2, 3)</math>, and <math>(-7, -2)</math></p>	<p>Find the slope between the following points: <math>(8, -4)</math>, and <math>(2, -4)</math></p>	<p>Find the slope between the following points: <math>(-9, 4)</math>, and <math>(-6, 0)</math></p>
<p>Write the equation of the line in slope intercept form.</p> 	<p>Write the equation of the line in slope intercept form.</p> 	<p>Write the equation of a line in slope intercept form that has a slope of <math>\frac{1}{3}</math> and has a y-intercept of 5.</p>	<p>Write the equation of a line in slope intercept form that has a slope of <math>\frac{2}{5}</math> and has a y-intercept of 1.</p>
<p>Find the value of x below:</p> 	<p>Graph <math>A(0, 0)</math>, <math>P(1, 5)</math> and <math>E(2, 1)</math> and then rotate it <math>90^\circ</math> clockwise about the origin.</p> 	<p>Point <math>A(3, -9)</math> is reflected across the line <math>y = x</math> to make point <math>A'</math>. If <math>A</math> and <math>A'</math> are opposite corners of a rectangle, what would the area of the rectangle be?</p>	<p>Find the value of x below</p> 
<p>Prove using a series of transformations that <math>\overline{BA} \cong \overline{DA}</math></p> 	<p>The vertices of <math>\triangle PQR</math> are <math>P(10, -6)</math>, <math>Q(6, 2)</math>, and <math>R(4, -1)</math>. What translation places the image of the triangle entirely in Quadrant II?</p>	<p>Prove using a series of transformations that <math>\angle EOP \cong \angle GOF</math></p> 	
<p>The measures of the angles in a triangle have a ratio of 1:4:7. Find the measures of these angles.</p>	<p>Solve for x in the triangle:</p> 	<p>Always, Sometimes, Never</p> <ol style="list-style-type: none"> <li>1. Right triangles have an acute angle in them</li> <li>2. The sum of all angles in a triangle is <math>180^\circ</math></li> <li>3. If two triangles are isosceles, then they are <math>\cong</math></li> </ol>	<p>Solve for x in the triangle:</p> 
	<p>Given that <math>\overline{CE}</math> is a perpendicular bisector, find the length of:</p> <p><math>\overline{AC}</math> _____ <math>\overline{DB}</math> _____</p> <p><math>\overline{DE}</math> _____</p>		<p>E, G, and K are midpoints. If <math>\overline{EK} = 5</math>, <math>\overline{EG} = 7</math>, and <math>\overline{FD} = 18</math>, then find the perimeter of <math>\triangle EGK</math>, then find the perimeter of <math>\triangle DFH</math>.</p>
<p>Solve for x and y in the figure:</p> 	<p><math>ABCD</math> is a parallelogram. Use a system to find x and y if <math>\overline{AB} = 6x + 30</math>, <math>\overline{BC} = 2x - 5</math>, <math>\overline{CD} = 2y - 10</math>, and <math>\overline{AD} = y - 35</math>.</p>	<p>Solve for b in the figure:</p> 	<p>A parallelogram has vertices <math>A(-1, 6)</math>, <math>B(5, 6)</math>, <math>C(3, -2)</math>, and <math>D(-3, -2)</math>. The diagonals intersect at point P.</p> <p>What are the coordinates of P?</p>
<p>A parallelogram has vertices <math>J(-3, 9)</math>, <math>K(3, 9)</math>, <math>L(1, 1)</math>, and <math>M(-5, 1)</math>. Show opposite sides are congruent by using the distance formula.</p>	<p>Solve for x and y in the figure:</p> 	<p>In rectangle <math>ABCD</math>, the diagonals intersect at point E. Find the value of x and y if <math>\overline{BE} = 3x + 1</math>, <math>\overline{ED} = x + 7</math> and <math>\overline{EC} = 5y</math>.</p>	<p>Find the length of <math>\overline{AP}</math> and <math>\overline{CP}</math>.</p> <p>Find the length of <math>\overline{BP}</math> and <math>\overline{DP}</math>.</p>

			What conclusion can you draw from this?
