

Cumberland Elementary 21st CCLC Young Scholars Club make DNA Necklaces

The Young Scholars Club in Cumberland Elementary School's 21st Century after school program recently made DNA necklaces. The Club is sponsored by Tiffany Scott with SKCTC AHEC. The students extracted their own DNA from their mouths then mixed several solutions in a test tube with their DNA. The final product was a double helix DNA necklace which formed inside of the test tube. The Young Scholars Club meets monthly during the 21st Century "Village Connection" program and is geared towards 7th & 8th grade students who are interested in pursuing a career in a health related field.
