

Recycling Program at EES Kicked-off

Lakis Mavinidis, County Solid Waste Coordinator and Bill Moore, District 2 Magistrate recently visited EES to kick off the school's Recycling Program. Recycling benefits the environment by conserving natural resources, saving energy and landfill space, along with contributing to the U.S. economy. Instead of letting these items end up at a landfill contaminating our land and taking space up at our landfills, Mavinidis said. He said when items are not recycled and they end up at landfills, this incurred an additional cost to the taxpayers and the county. The school will have cans distributed around the building for cans and plastic bottles. EES Principal, Edna Burkhart, said the recycling program is a chance for our students to assist with one of the simplest ways you can help the environment by recycling. It takes so little time and effort, but saves so much material from ending up in the landfill. They also learn a valuable lesson in the process.
