

Museum Comes to Black Mountain Elementary

Students at Black Mountain Elementary were treated to an “all day” science program to enhance their science curriculum and get students motivated about science and technology. The STEAM Museum is a portable “hand-on” museum that combines science, technology, engineering, art and math and enables students to explore all the STEAM disciplines at their own pace. Some activities students explored were 3D-printing, Newton’s Cradle, robots, gears, and building their own arch. This program was hosted by Black Mountain Elementary and sponsored by the Black Mountain Elementary FRYSC.
